

SimTrade: Empower yourself!

SimTrade mission is to train individuals
to act *freely* in financial markets.

SimTrade certificate

The SimTrade certificate is a unique pedagogical experience based on the **learning by doing** approach.

The SimTrade certificate is organized over three periods (a semester of 15 weeks) and is structured with courses, simulations, contests and case studies in each period.

- Home page of the certificate: work to do in each period -

The screenshot displays the SimTrade certificate interface for BBA FALL 2020. The main header shows 'CERTIFICATE 16 / 20' with progress bars for COURSES (16/20), SIMULATIONS (19/20), CONTESTS (14/20), and CASE STUDIES (16/20). The current period is 'Period 2', which is highlighted in green. Below this, there is a section titled 'Presentation of Period 2' with a calendar icon and text indicating the end date for courses, simulations, and case studies is Saturday 31 October 2020 at 23:59:59, and the contest ends on Tuesday 27 October 2020 at 23:59:59. A 'Work to do' section lists tasks under three categories: Course (Market Information), Contest (Contest for the Sale of Gold), and Case study (Analyze an Event). A 'Simulations' section lists three types: Efficient Market, Inefficient Market, and Inefficient Market.

Market simulations: added value of SimTrade

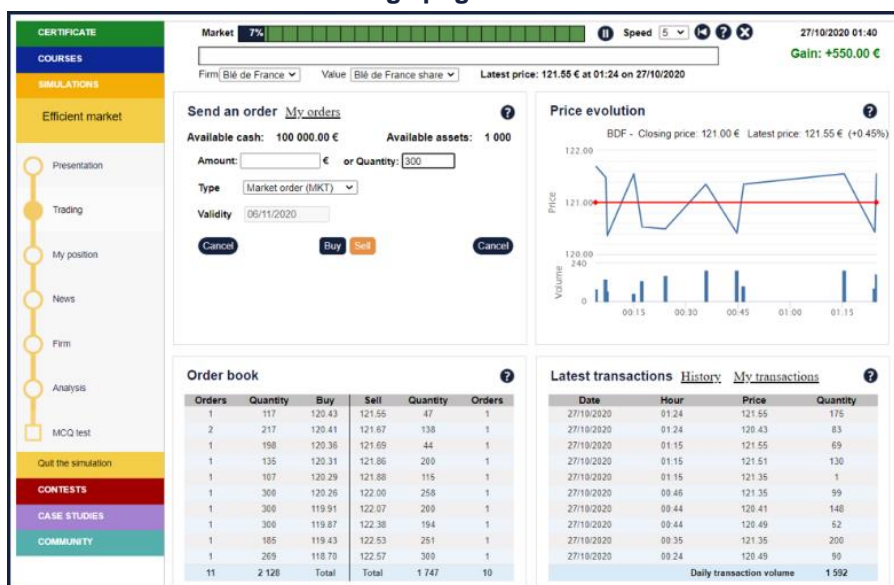

SimTrade offers a trading platform to learn how to act in financial markets. In a fictitious but realistic way, you can send orders to the market to buy or sell shares of a company under predefined and reproducible scenarios.

SimTrade also simulates traders with whom you can buy and sell shares. Underlying each simulation, there is a simulation model that reproduces the realistic behavior of simulated traders with different trading strategies.

SimTrade finally simulates the company that issued the shares. In each simulation, a company appears with its history, sector, products, etc. During the simulation, a series of events will happen about the company and its environment.

The originality of SimTrade is to simulate not only orders sent by SimTraders but also the realistic behavior of other traders, the events about firms and the evolution of financial asset prices. In such a complete simulated world, SimTraders have a **direct impact on the market**.

- The "Trading" page in a simulation -

In each simulation, the SimTrader has a **learning objective**: evaluate your impact on the market, analyze the news flow of financial markets, assess the level of market efficiency, capture the order flow, make profits in the business of market making, etc.

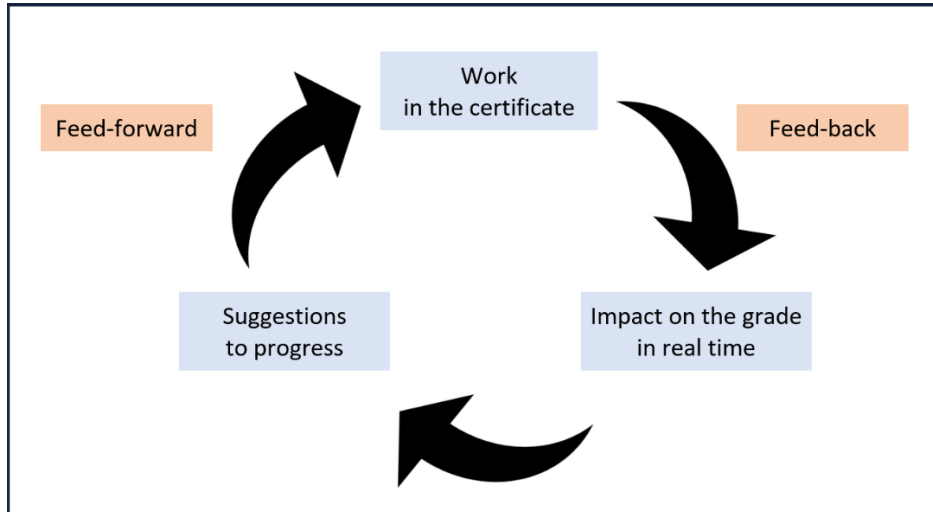

Pedagogical innovation: feed-back and feed-forward

A lot of efforts have been put in the SimTrade project to provide a successful learning experience for the participants. SimTrade proposes a **virtuous circle** to motivate participants to progress in their learning path. This virtuous circle relies on two pillars: feed-back and feed-forward.

Feed-back: once the participant has worked on a given element (a course, a simulation, a contest or a case study), he or she can see *in real time* the impact of its work and effort on its certificate grade and Bloom profile (taxonomy of learning objectives).

Feed-forward: the SimTrade application proposes to the participant *in a personalized way* what to do next in the certificate. The suggestions of further work are based on the data analysis of the experience of past participants (use of AI tools such as the association model).

- The virtuous circle in learning with feed-back and feed-forward effects -

As the SimTrade experience takes place on-line, such a virtuous circle in learning is crucially needed to sustain participants' motivation and engagement, and finally reach the highest completion rate.

Summary & Objectives

In a pedagogical and fun manner, this certificate proposes an original approach to both financial markets and corporate finance. It uses the SimTrade simulation platform to discover financial markets and their interactions with the real world.

SimTrade proposes a **learning experience** based on online **simulations** in which you can act as a trader in financial markets. Simulations place participants right in the mix of realistic market scenarios where you can practice applying concepts, theories, and frameworks to accomplish successful market outcomes. From a pedagogical point of view, this learning experience is designed to help you to:

- Become more engaged and motivated to learn
- Deepen your understanding of learning objectives
- Develop confidence in your decision making and critical thinking skills.

The objectives of this certificate are to present some basic parts of finance: financial markets and corporate finance. How do financial markets work? How can you intervene in financial markets? How firms are valued by financial markets? What are the activities and added value of financial markets?

The SimTrade certificate provides students with both relevant knowledge and hands-on skills highly valued by firms and financial institutions to tackle the real complexity of financial markets.

Beyond the on-line courses, market simulations, trading contests, case studies and experiments in behavioral finance, the SimTrade certificate has nothing to offer but **hard work**. The return that you will get on this certificate depends on **your personal investment** only.

Certificate outline

The SimTrade certificate is structured by periods. Each period is composed of different pedagogical elements: courses, simulations, contests and case studies.

There is a theme for each period:

- Period 1: introduction to financial markets and to the simulation platform (trading)
- Period 2: information in financial markets and firm valuation (financial analysis)
- Period 3: activities of financial markets (market making).

Teaching methods

The certificate is on-line using the SimTrade application. It proposes **different ways of learning**: theoretical concepts through courses, practical applications through simulations (learning by doing), gaming through trading contests and link with reality through case studies.

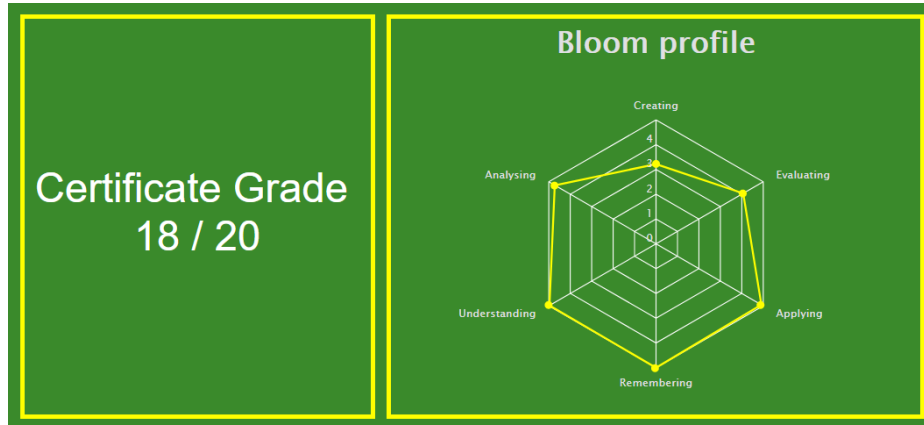

In order to sustain attention and to boost confidence, **a series of webinars** will be organized through the certificate.

Beyond theory and practice in finance, you will improve the following **soft skills**: to make decisions under risky and uncertain conditions and under stress, to deal with the complexity of information about firms and markets, and to develop autonomy and to reinforce self-confidence. This certificate is also an excellent opportunity to invest in your own mental software to optimize your learning process.

Evaluation & Grading

During the certificate, you can track your progression online through the “My progress” page on the SimTrade application. This page gives you *in real time* your grade with all the details by course, simulation, contest, case study and exam.

- Certificate grade and Bloom profile given in real time to participants -

For courses, you are classically evaluated through multiple choice questions (MCQ tests). For simulations, you are evaluated by the market based on your trading performance. For trading contests, you are evaluated according to your rank. For case studies, you are evaluated by your peers.

The “My progress” page also gives your evolution with the **Bloom profile** (taxonomy of educational objectives): knowledge, understanding, application, analysis, evaluation and creation. Finally, this page suggests you a personalized path to progress through the SimTrade certificate.

You need to get a grade higher than **60/100** to get credit for your curriculum for the BBA at SolBridge, and a grade higher than **15/20** to obtain your **SimTrade Certificate**. You can value your certificate by mentioning it on your CV and your account on professional networks like LinkedIn to improve your value on the job market.

About the SimTrade coordinator

François Longin is professor of finance at ESSEC Business School and consultant for financial institutions and firms. He graduated from the French engineering school Ecole Nationale des Ponts et Chaussées in 1990 and got a PhD in finance at HEC Paris in 1993 with his thesis “Volatility and extreme price movements in equity markets”. He then conducted research on financial markets at New York University and London Business School. His research works deal mainly with extreme events in finance and financial applications of extreme value theory in risk management and portfolio management. His works have been published in international scientific journals such as *Journal of Finance*, *Journal of Business*, *Review of Financial Studies*, *Journal of Banking and Finance*, *Journal of Derivatives* and *Journal of Futures Markets*. His article on extreme correlation of financial markets is ranked in the TOP 50 of *Journal of Finance*.

The domain of expertise of Prof. Longin covers risk management for banks, portfolio management for fund management firms, financial management for firms and wealth management for individuals. He is a consultant for international institutions in these areas. More on www.longin.fr.

Prof. Longin currently contributes to the SimTrade project, which is a pedagogical tool to understand how financial markets work and to learn to act in financial markets, and a research program to better understand the behavior of individuals and the statistical characteristics of financial markets.
